DiagnoPhish

Strengthen your company's security! Assess your security posture. Train your users to anticipate threats and resist phishing.

Many successful attacks are based on phishing/social engineering. When our experts carry out penetration tests or security audits, they find that IT users often fall victim to the same traps, exposing themselves and their organisations.

A pragmatic solution

Based on these findings, we developed the DiagnoPhish security awareness platform. It reflects our concrete perception of the cyber risks/threats in Switzerland and Europe and trains IT users to apprehend and counter the threats in a pragmatic way. DiagnoPhish is safe, effective, and very affordable!

A simple approach

The awareness and training campaigns are based on:
- Phishing simulations
- Videos explaining sensitive security issues
- Awareness quizzes on specific topics

Contents are available in English, French and German. Other languages or templates can be supplied on request.

Sharpens critical thinking

Our approach not only imparts knowledge, it also trains employees to take a critical look at the emails they receive. To this end, DiagnoPhish offers cybersecurity Trails. After an initial notification, users are confronted over time, at random intervals, with various security challenges. As they are required to remain vigilant over a longer time, they lastingly improve their perception of risks.

Effective and fun

Not only is our approach accessible, it also gets people talking about security at work. User behaviour will improve significantly over time.

Navixia SA

Navixia is a Swiss limited company which offers a global and pragmatic approach to information security.

Our efficient, mobile and highly experienced team consists of senior professionals who are all passionate about IT security. Some of them are pioneers and leading experts in their field.

DiagnoPhish

A learning and assessment tool developed by Navixia based on field observations. It makes employees considerably more resistant to IT risks.

Key features

Compact and efficient
Your employees don't need to spend a lot of time on the training for it to be fully effective. It just takes a few minutes a month.

Easy monitoring and remediation
A clear view of user progress over time makes it possible to implement appropriate corrective action on a person-by-person basis.

Managed service
We take (almost) all the work out of your hands, while you benefit from our expertise. We manage not only the campaigns themselves, but also the related communication designed to increase user involvement. Most of our customers choose this approach. But if you prefer, you can also manage the whole process yourself.

Bringing new staff up to speed
They will quickly acquire the basic tools they need to protect themselves against risks.

Easy incident reporting
The Outlook Add-In installs an additional button in each user's Outlook menu, enabling them to report suspicious e-mails in one click.

Flexibility & individual follow-up

The powerful dashboard provides a comprehensive overview of the progress of each awareness campaign, from start to finish.

This makes it possible to monitor user performance and propose targeted extra trainings if and when needed.
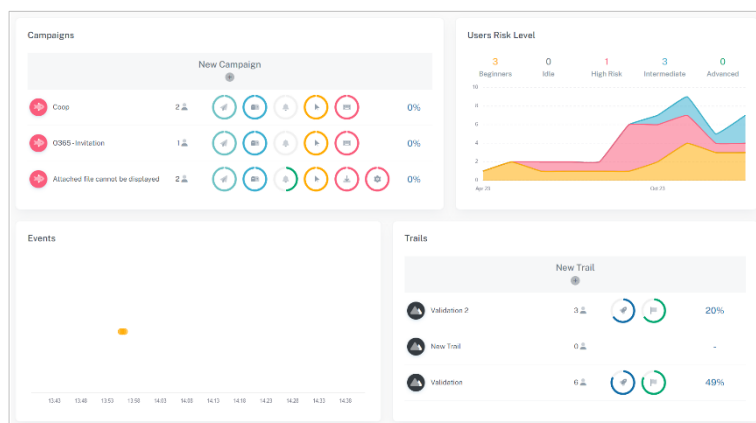

Flexible approach

No need to upset everyone's working schedule to organise awareness sessions: the challenges take a few minutes at a time and users can complete them from their workstations or mobile devices.
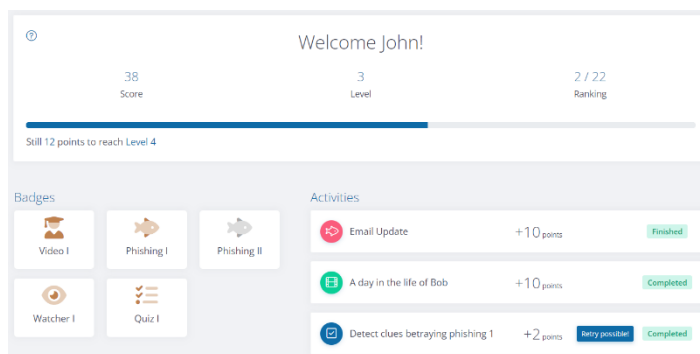

Gamification

Users earn points for each challenge they complete. The more active they are, the more they improve their score. For added motivation, they can track their progression on their personal dashboard.

Swiss security standards

DiagnoPhish is developed and hosted in Switzerland and provides the highest security standards of data protection.
Your data is stored exclusively on a highly secure server in Switzerland. No customer information is transferred, seen or used by anyone but yourself. You may delete by yourself all your data stored on our servers at any time you choose. We are RGPD and nFADP compliant.
